Home

Documentation of the FullStack solution **bolinho**.

This documentation automatically generates a <mark>PDF file</mark> from it's content. You can download it here.

You can see the React Front-end HERE!

This is a static version of the app, without access to the server, therefore most features won't work.

> **Info**
>
> Remember that you need to build the app for it to show on the static page, so run `npm run buildWeb` or something similar to build it.

Use the **Tabs** above to navigate through the documentation.

Known bugs

The full list of known bugs can be seen at https://github.com/HefestusTec/bolinho/issues?q=is%3Aopen+is%3Aissue+label%3Abug

Running

As for running the program we have a few options:

- Run only the frontend `npm run startWeb`
- Run only the backend `npm run startEel`
- Serve the full application `npm run serve`

  This command will start the eel as headless and start the web serve, it doesn't need to build the front end before executing. **Less performant**.

> To update the backend ability to call front end functions you should first build the front.

- Run the full application `npm run start`

  With this command it will first build the react front end, then run the python script.

- Build the react frontend `npm run buildWeb`

- Build binaries. `npm run buildBin`

    - You can build the "binaries", more like a python environment wrapper, it uses [PyInstaller](#) to generate the bins.

    - The output path is `bolinho/src/dist/`

> Did you like this documentation? You can check out the repo [ZRafaF/ReadTheDocksBase](#) for more info 😄.
